

Introduction to Genres and Genre Film

Chanda Crews

ENG225: Introduction to Film (GSK1634E)

Instructor: Sarah Thaller

August 29, 2016

- Explain genre theory and, using Chapter 4 of the text as a reference, thoroughly describe the conventions and attributes of your selected genre.

Science fiction is a genre that focuses on new discoveries, zombies, and robots other planets, the moon and other advance in technology and even behaviors not familiar to the human being such as possessing powers (Roberts, 2006). The genre concentrates on things that the people have to imagine and assume that they exist. Science fiction movies depend on scientific facts, nature and also scientific theories. The convention of scientific convention includes setting, film techniques, narrative element, and symbolism. Setting this is the period and the place that the film is about it can be the previous years or many years to come. It makes the audience think about the movie in those times and not compare with the actual time. The place could be in another world, the moon or other planets. The film techniques, this is the type of shots that are taken during the shooting the techniques are important because they make the film to appear real and flow with the movie. Narrative content is the use of the technology invention such as a robot that is functioning like a normal human being. (Sanders, 2008) It is also about the things happening in the film the problems, the challenges amongst other situations.

- Identify a feature-length film that fits this genre and provides a basic summary of the movie. As you develop this summary, remember the differences between a film's story and a film's plot and how these differences can lead to the inclusion of genre elements.

Planet of apes³ is the film I will focus on. It is a science fiction.⁴ The drug that helps in healing brain disorder the story is now where the knowledge of the Apes is put into test and that of the human being. The chimpanzee is carefully observed as he is given the task of lurker's tower he is supposed to move the tower from peg to peg without placing the larger block on the small one. She fails to complete the puzzle then they gave her ALZ 112 gene therapy which enables the brain to create its cell to repair its self. In biology, this is called neurogenesis. The therapy can be used to treat the wide range of brain disorder. They are seeking for the human trial to the administering of the drug. The ape goes wild and causes the commotion in the company while the board meeting was proceeding the scientist discover that the chimpanzee has personality and attachment. The chimpanzee was pregnant, and she was not aggressive rather she was protective. Franklin gives will the baby chimp to stay with it for a few days. Will goes home with to live with the ape together with his father who has a mental disorder. They name him scissor by 18 months he was signing up to 24 words by 18 months he was completing by three years he could complete the tower and play chess. When the condition of his father deteriorates, he administers the drug, and his father responds positively. Scissor is taken for walks, and he protects the father to scissor when he was harassed. They take him to control unit where he has a hard time relating with another chimpanzee. When scissor is taken in the cage, the chimp is mad at him at him, this time, Will is working on the legal papers from the court to have scissor back home. Three months later Will goes to pick him from the zoo Scissor turns down the freedom of going home opting to remain with the others. He starts to cry showing emotion and also appoint that he

1. conventions

Chanda,

This needs to be formatted as an essay rather than as a series of short answers. Please make sure to put all future assignments in an essay form [Sarah Thaller]

2. Science fiction is a genre that focuses on new discoveries, zombies, and robots other planets, the moon and other advance in technology and even behaviors not familiar to the human being such as possessing powers

Try reading your essay out loud. This technique can help you to eliminate awkward phrasing, repetition, and other errors. For additional assistance, use the Grammarly tool. Visit the 'Writing Center & Library' link in your course where you will find the Grammar Help tab. Use the directions found there.

The phrasing here is a bit off, and be careful where you place the "and" when listing items/elements [Sarah Thaller]

3. Planet of apes

You need to capitalize and format film titles properly. They should be either underlined or in italics (one or the other but do not go back and forth). I won't mention this again so please be mindful in future assignments [Sarah Thaller]

4. fiction. .The

What is happening here with your punctuation? [Sarah Thaller]

had adapted to the environment. He can master the code and escapes go to will house and steal the drug which makes them smarter and plans for an escape they cause the commotion in the neighborhood later they invade the company and destroy the property. The apes manage to go back to the forest.

- Interpret at least two genre conventions exhibited in your chosen feature-length film that help classify it in the selected genre. Be sure to provide a specific example of each convention (e.g., a particular scene or plot component).

The film is a scientific fiction because the scientist is working on a drug that will help the brain to create its cell to repair themselves so during the board meeting to decide whether they will allow it to be administered to the human being, so they had earlier tested the drug on the ape. As part of the observation, scissor whose mother passed the gene of the drug that had been administered to her during pregnancy grows up being very smart he can complete puzzles, play chess, use gestures. When the health of will father worsens he decide to put the drug into test and the drug works positively on the father.

- Provide an example of the third convention from your chosen feature-length film and explain how this convention expands the boundaries of the specified genre.

Another example of how the convention expands the boundaries is of the intelligence in scissor he escaped the zoo, stole the drug from Will's room and went back to the zoo where he destroys the containers with the drug, and they inhale, then they start understanding that the zoo is not their native home which they later successfully planned and stormed out, went to the company and destroyed it.

1. later

Where is your discussion of plot? Remember that plot is HOW the story is told

[Sarah Thaller]

2. The film is a scientific fiction because the scientist is working on a drug that will help the brain to create its cell to repair themselves so during the board meeting to decide whether they will allow it to be administered to the human being, so they had earlier tested the drug on the ape.

This is a run-on sentence.

The following example demonstrates how to correct this error: It is correct to write, "Samantha wrote a paper. Anne worked on her math homework," rather than "Samantha wrote a paper Anne worked on her math homework." For additional information, please visit the 'Writing Center & Library' link in your course where you will find the Grammar Help tab. Click on the "Run-ons and Comma Splices" link.

[Sarah Thaller]

3. the

Where is your interpretation of genre conventions? This is just more summary but you aren't exploring aspects of science fiction as a genre

[Sarah Thaller]

4. Another example of how the convention expands the boundaries is of the intelligence in

But what is the third convention? Again, this is pretty much entirely summary and you seem to have forgotten to discuss the elements of the genre. For future assignments, read the requirements carefully to ensure that you are fulfilling exactly what the assignment is asking for. [Sarah Thaller]
